

APPLICATION VS. BUSINESS LOGIC

- 👉 Code that is only concerned about the application's implementation, not the underlying business problem we're trying to solve (e.g. showing and selling tours);
- 👉 Concerned about managing requests and responses;
- 👉 About the app's more technical aspects;
- 👉 Bridge between model and view layers.

- 👉 Code that actually solves the business problem we set out to solve;
- 👉 Directly related to business rules, how the business works, and business needs;
- 👉 Examples:
 - 👉 Creating new tours in the database;
 - 👉 Checking if user's password is correct;
 - 👉 Validating user input data;
 - 👉 Ensuring only users who bought a tour can review it.

👉 **Fat models/thin controllers:** offload as much logic as possible into the models, and keep the controllers as simple and lean as possible.
